

EDUCATION

University of Nigeria, Nsukka
B.Sc. Marketing
Graduated 2023

AltSchool Africa
Diploma, Frontend Engineering
In Progress

3MTT Nigeria · Sept to Nov 2024
Software Development

Utiva · Aug to Dec 2022
Frontend Web Development

CORE TECHNOLOGIES

- HTML5, CSS3, Sass, SCSS
- Tailwind CSS
- JavaScript, ES2015 to ES2023
- TypeScript
- React.js
- Next.js (App Router)
- React Native
- Vue.js
- WordPress (early career)

STATE & DATA

- Redux Toolkit, RTK Query
- React Query (TanStack v5)
- Zustand, Jotai
- Context API, SWR
- GraphQL, Apollo
- REST APIs, JWT auth

ARCHITECTURE

- Component design systems
- Atomic Design
- Micro-frontends
- Module Federation
- Monorepo (Nx, Turborepo)
- Storybook
- Cross-platform (React Native + Web)

PERFORMANCE

- Core Web Vitals (LCP, INP, CLS)
- SSR, SSG, ISR
- Code-splitting, lazy loading
- Bundle analysis, tree-shaking
- PWA, Service Workers
- Web Workers

TESTING

- Jest, Vitest
- React Testing Library
- Cypress (E2E)
- Mock Service Worker (MSW)

TOOLING & DELIVERY

- Git (advanced workflows)

UGWUJA LIVINUS EKENE

Frontend Engineer · React.js · Next.js · React Native · TypeScript

· ugwujalivinusekene@gmail.com · [GitHub](#) · [LinkedIn](#) · [Portfolio](#)

SUMMARY

Frontend engineer with 5+ years of experience building production web and mobile interfaces using React.js, Next.js, and React Native. Moved into software development from a Marketing background, building hands-on skill through agency work, freelance contracts, and structured learning through AltSchool Africa and 3MTT Nigeria. Improved site load time by 45 percent on FusionTools Pro through Next.js code-splitting and caching strategies. Comfortable across the stack, including component architecture, state management, performance optimisation, and CI/CD pipelines, with hands-on React Native experience delivering cross-platform mobile features. WCAG 2.1 compliant across shipped web products.

SKILLS SNAPSHOT

Frameworks & Libraries: React.js, Next.js 14, React Native, TypeScript, JavaScript (ES2023), Vue.js, Tailwind CSS, Sass

State Management: Redux Toolkit, React Query (TanStack v5), Zustand, Context API, SWR

Architecture: Micro-frontends, Module Federation, Atomic Design, Design Systems, Storybook, Monorepo (Nx, Turborepo)

Performance: Core Web Vitals, SSR, SSG, ISR, code-splitting, PWA, Service Workers, Lighthouse CI, bundle analysis

Mobile: React Native, cross-platform UI, native module integration, mobile performance debugging

Testing: Jest, React Testing Library, Cypress, Vitest, TDD, Mock Service Worker

Tooling: GitHub Actions, Docker, Vercel, AWS S3 and CloudFront, Webpack 5, Vite, ESLint, Prettier

Accessibility: WCAG 2.1 AA, semantic HTML5, ARIA, keyboard navigation, screen reader testing

EXPERIENCE

Ontime Maritime

Maritime logistics company, Lagos, Nigeria

Frontend Engineer · Sept 2025 – June 2026

- Built the company's internal operations portal from the ground up using Next.js 14 App Router and TypeScript, now used by 30+ operations staff daily to manage vessel scheduling, shipment tracking, and cargo operations in one place.
- Designed a live data dashboard using WebSockets and React Query that replaced manual spreadsheet-based reporting, cutting the team's daily reporting overhead from approximately 4 hours to under 40 minutes.
- Set the frontend architecture for the project using Webpack 5 Module Federation, keeping the booking system, tracking dashboard, and admin panel independently deployable by different team members.
- Set up a Storybook component library with Tailwind CSS, 35+ documented components, reducing back-and-forth with the design team and cutting implementation time on new features.
- Configured GitHub Actions pipelines with Jest unit tests, Cypress E2E smoke tests, and Vercel preview deployments on every pull request, reducing QA turnaround from roughly 2 days to same-day review cycles.
- Built all delivered pages to WCAG 2.1 AA, with full keyboard navigation, ARIA labelling, and accessible form patterns.
- Mentored 2 junior developers through weekly code reviews covering component composition, TypeScript patterns, and performance debugging with React DevTools.

Stack: Next.js 14, React 18, TypeScript, Tailwind CSS, React Query v5, WebSockets, Webpack 5, Storybook, Jest, Cypress, GitHub Actions, Vercel

Droid

Rivers State, Nigeria

React Native Developer · 2025, 6-Month Contract

- GitHub Actions, CI/CD
- Vercel, Netlify
- Docker
- AWS S3, CloudFront
- Webpack 5, Vite
- Lighthouse CI
- Figma, Accessibility (WCAG 2.1)

WORKING STYLE

- Cross-functional collaboration
- Remote team leadership
- Mentoring, code review
- Technical documentation (RFCs)
- Agile, Scrum
- Problem-solving under pressure

LANGUAGE

English, fluent

CERTIFICATIONS

Software Development · TechPem

Website Development · Utiva

Software Development · 3MTT

- Delivered cross-platform mobile features using React Native, working alongside a small product team to ship UI screens and navigation flows for an early-stage app.
- Integrated REST APIs into the mobile app using React Native networking patterns and React Query, handling authentication state and offline-friendly data caching.
- Worked remotely with backend and design contacts to translate Figma mobile mockups into functioning React Native screens within tight contract timelines.

Stack: React Native, React.js, TypeScript, REST APIs, React Query

Nextbud

United Kingdom (Remote)

Next.js Developer · Mar – Jun 2025

Took on a part-time Next.js contract for a UK-based client, building new pages and features using the App Router with a mix of Server and Client Components.

- Chose page-level rendering strategies, SSR and static generation, based on content type, balancing data freshness against page load speed for the client's marketing and product pages.
- Built Route Handlers to connect frontend pages to the client's backend services, handling form submissions and data fetching without exposing sensitive keys to the browser.
- Used next/image and next/font to optimise image delivery and font loading, improving Lighthouse performance scores on pages handed over for review.
- Set up metadata and Open Graph tags using the Next.js Metadata API to improve SEO and social sharing previews on key landing pages.
- Added middleware for basic route protection and redirects, and styled all delivered pages with Tailwind CSS to match the client's existing design language.
- Worked directly with a remote client to scope small feature requests and turn them around within short contract timelines, communicating async across time zones.

Stack: Next.js 14 (App Router), React.js, TypeScript, Tailwind CSS, REST APIs, next/image, next/font

Ziners

Frontend development agency, Lagos

React Frontend Engineer · Jan 2025 – Aug 2025

- Reduced site load time by 45 percent on FusionTools Pro by migrating to Next.js code-splitting, route-level caching, and lazy-loaded components, the most impactful single performance improvement delivered during the engagement.
- Led the App Router migration across 3 Next.js products, introducing Server Components and ISR to cut Time to First Byte and reduce client-side JavaScript payload.
- Enforced TypeScript strict mode across a shared codebase used by 8 engineers, eliminating a recurring class of runtime errors that had been causing production incidents.
- Built an accessible component library directly from Figma, with ARIA roles, keyboard focus management, and responsive behaviour built in from the start rather than added afterward.
- Integrated REST APIs across all products using React Query for caching, background refetch, optimistic updates, and structured error handling, replacing ad-hoc fetch calls with no retry logic.
- Brought Core Web Vitals down across the product suite, with LCP improving from roughly 3.8 seconds to 2.1 seconds and CLS reduced to near-zero through image dimensioning and font preloading.
- Mentored junior engineers weekly on React performance patterns, including memoisation, avoiding unnecessary re-renders, and useTransition, alongside clean component API design.

Key client project: Kazfield ISL, a live analytics dashboard built for an external client (kazfieldisl.com), unrelated to Kazzfield real estate listed separately below.

Stack: Next.js 14, React 18, TypeScript, React Query, JWT, React Hook Form, Zod, GitHub Actions, Vercel

Isong Technologies

Software consultancy, Lagos, Nigeria

Frontend Engineer · Jan 2023 – Dec 2024

- Designed and implemented a modular React and TypeScript frontend architecture using Atomic Design principles, setting folder conventions and component contracts that made the codebase navigable for new team members from day one.
- Built and owned a shared Storybook component library, 60+ documented, tested, and accessible components, adopted across 4 product squads, cutting time from design handoff to working UI.
- Replaced fragmented fetch calls and local state with Redux Toolkit (RTK Query) and React Query, bringing server-state caching, optimistic updates, and consistent error handling to the platform.
- Built secure, data-heavy admin dashboards integrating RESTful APIs, with skeleton loaders, error boundaries, infinite scroll pagination, and role-based rendering, all without a third-party dashboard framework.
- Applied security-focused frontend practices throughout, including DOMPurify for user-generated content, httpOnly cookie token storage, Content Security Policy headers, and HTTPS-enforced API communication.
- Set up Webpack 5 Module Federation across 3 frontend applications, letting each squad deploy independently without coordination overhead or shared-bundle breakages.
- Built GitHub Actions CI/CD pipelines with Jest coverage gates, Cypress E2E runs, and staged deploys to AWS S3 and CloudFront, cutting manual QA time before production releases by roughly 50 percent.
- Wrote technical RFCs and architecture decision records for major frontend decisions, keeping the wider team aligned without requiring a meeting for every choice.

Stack: React.js, TypeScript, Redux Toolkit, React Query, Webpack 5, Storybook, Jest, Cypress, GitHub Actions, AWS S3, CloudFront

TechPem Nigeria

Digital agency, Lagos, Nigeria · techpem.com

Frontend Developer · Jan 2022 – Dec 2023

- Delivered 6 client production websites, handling everything from translating Figma designs into HTML, CSS, and JavaScript to deploying via Git and handing off to clients.
- Built responsive, cross-browser interfaces using HTML5, CSS3 (Grid, Flexbox), and JavaScript ES6+, maintaining compatibility across Chrome, Firefox, Safari, and Edge without a dedicated testing service.
- Created a reusable React component library for recurring UI patterns across client projects, cutting duplicated work per project and keeping styling consistent as the agency's design language evolved.
- Added Progressive Web App features, including a Web App Manifest, Service Worker caching, and offline fallback, on client sites, improving repeat visitor engagement and enabling basic offline functionality.
- Optimised frontend performance using WebP images, JS minification, resource preloading, and lazy loading, lifting average Lighthouse performance scores from around 55 to 85+ across delivered projects.
- Worked directly with UI/UX designers, attending design reviews and feeding accessibility requirements back into Figma before development began, cutting late-stage rework on client builds.

Stack: HTML5, CSS3, JavaScript (ES6+), React.js, SCSS (BEM), Tailwind CSS, Webpack, PWA, Git, GitHub, Figma

Kazzfield

Real estate company, Lagos, Nigeria

Web Developer · 2020

- Built and maintained the company website, handling layout, content updates, and property listing pages for a real estate business.
- Worked with HTML, CSS, and JavaScript to keep the site responsive and functional across desktop and mobile browsers.

Stack: HTML5, CSS3, JavaScript, WordPress

Shile Estate

Real estate company, Lagos, Nigeria

WordPress Developer · 2019

- Redesigned the company's real estate website on WordPress, improving page layout, property listing presentation, and overall usability.
- Customised WordPress themes and plugins to match brand requirements and support property search and listing functionality.

Stack: WordPress, HTML5, CSS3, JavaScript

SELECTED PROJECTS

Nextbud · nextbudapp.com

Problem: UK-based client needed new marketing and product pages delivered within a short contract window.

My role: Built pages using the Next.js App Router, choosing SSR or static generation per page, with optimised images, fonts, and SEO metadata.

Outcome: Delivered all scoped pages within the contract timeline, coordinating async across time zones.

Stack: Next.js 14, React.js, TypeScript, Tailwind CSS

Ontime Maritime · ontimemaritime.com

Problem: Operations team had no centralised system for vessel scheduling, shipment tracking, and cargo management.

My role: Built the company's internal operations portal from scratch using Next.js 14, a live WebSocket dashboard, and a Storybook component library.

Outcome: Cut daily reporting time from roughly 4 hours to under 40 minutes.

Stack: Next.js 14, TypeScript, Tailwind CSS, React Query, WebSockets

Kazfield ISL · kazfieldisl.com

Problem: Client needed live operational data visibility across business units in one interface.

My role: Built a fully responsive analytics dashboard with REST API integration, chart components, and role-based views.

Outcome: Replaced manual reporting with real-time, filterable data views accessible to the ops team.

Stack: React.js, TypeScript, REST API, Recharts, Tailwind CSS

Portfolio · livinus-ekene-ugwuja.vercel.app

Problem: Needed a central showcase for projects, skills, and professional presence.

My role: Designed and built from scratch, fully responsive, accessible, and optimised.

Outcome: Live personal portfolio linking all major project work.

Stack: Next.js, Tailwind CSS, Framer Motion, Vercel
